

ESG Report Summary

Sustainability at Axell Group: building a responsible future

At Axell Group, sustainability is an important part of how we build for the future. Our Sustainability Report 2025 provides insight into our environmental, social and governance (ESG) performance and establishes a baseline for further improvement.

In 2025, our Scope 1 and Scope 2 greenhouse gas emissions amounted to approximately 3,980 tCO₂e. We are working to reduce our environmental impact through initiatives such as route optimisation, eco-driving, fleet renewal, LED lighting and more sustainable energy solutions. A new Transport Management System will also help improve efficiency and provide better insight into our carbon footprint.

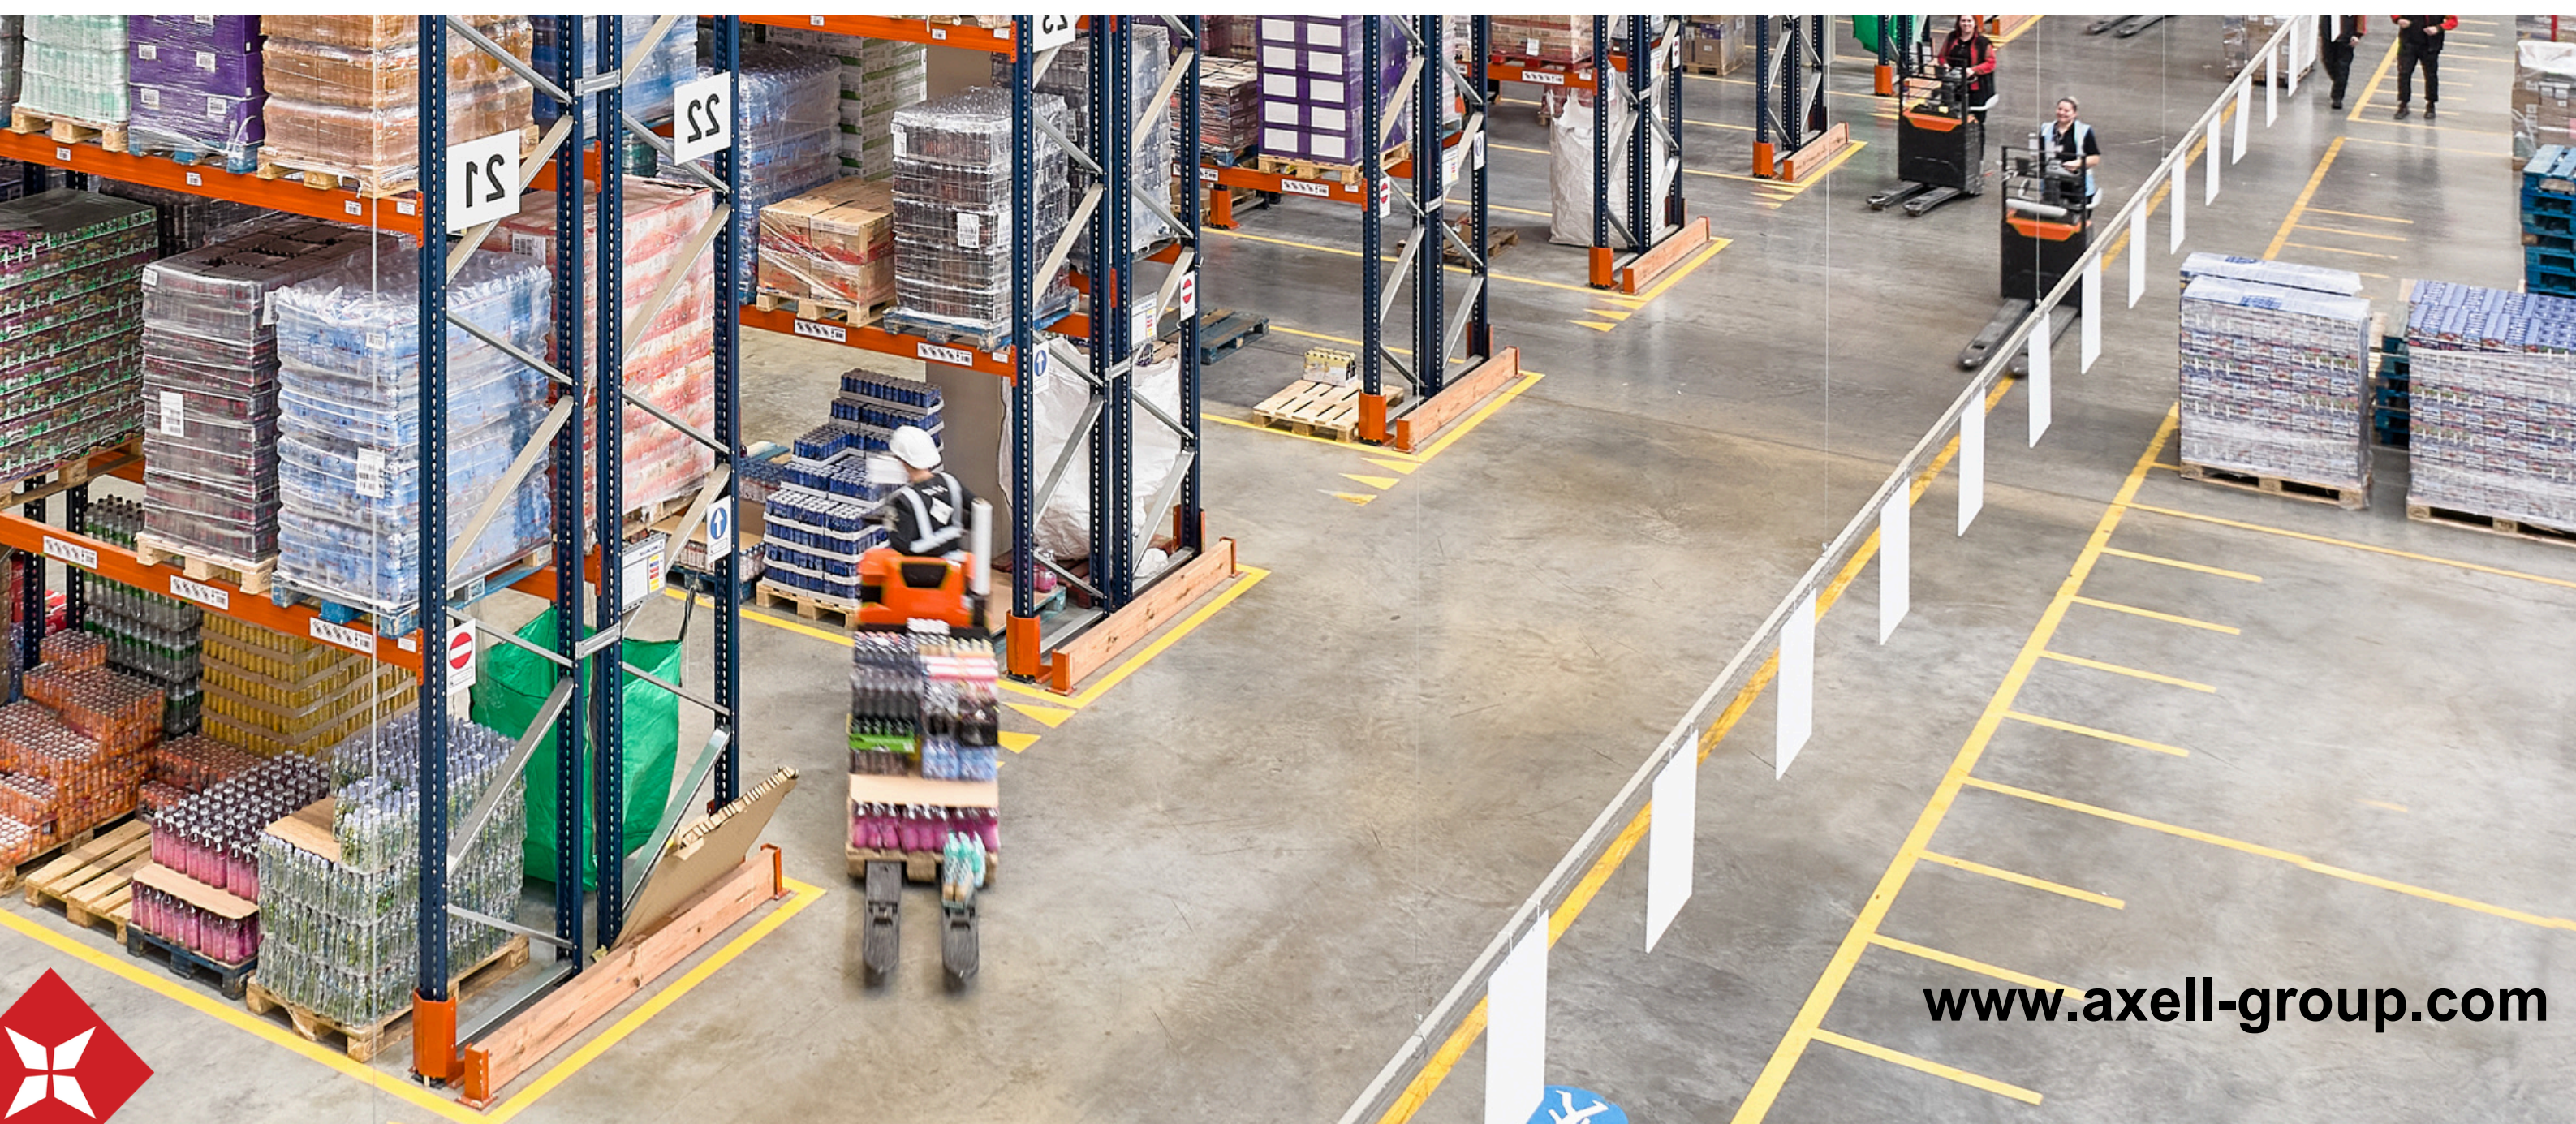

Our sustainability approach goes beyond emissions. Employee health, safety and development remain key priorities, supported by training, preventive measures and further investment in learning and development.

Looking ahead, we aim to further integrate sustainability into our operations and decision-making. Our long-term ambition is to achieve net-zero Scope 1 and Scope 2 emissions by 2050, with intermediate reduction targets towards 2030.

By measuring our impact and taking practical steps, we continue to work towards responsible growth and a resilient organisation for the future.

Building a sustainable future together

Sustainability is a continuous journey. By **taking responsibility**, **measuring our impact** and **making deliberate choices**, we continue to build a resilient organisation for our employees, customers and partners. Together, we aim to create lasting value for people, business and the environment.

A man wearing a high-visibility yellow vest and grey jeans is sitting in the driver's seat of a truck. The truck's door is open, and the interior of the cab is visible. The background is slightly blurred, showing an outdoor setting.
